

Problem Statement:

Consumers often overspend on essential groceries because prices fluctuate daily across different stores, and there is no centralized tool to compare these costs in real-time. Shoppers lack the ability to easily view historical price trends or receive notifications for price drops on staples like milk or eggs, making it difficult to find the best value without visiting multiple websites or locations physically.

Product Name: GrocerSave

Project Lead: Anas Abu Mosameh

Team: Justin Duong, Asim Irfan

Synopsis:

GrocerSave is a comprehensive grocery tracking platform designed to help users minimize their spending by aggregating real-time price data from multiple local stores. Our system utilizes automated scrapers to collect pricing, while a robust backend analyzes historical trends to identify the "cheapest option" and visualize price fluctuations over time. By offering features like daily top deal alerts and price history charts, GrocerSave eliminates the guesswork from grocery shopping, empowering users to make data-driven purchasing decisions and secure the best possible deals without the hassle of manual comparison.
